Publisher R.R.K. Hartmann | University of Exeter Hardbound â Available Most dictionaries have precursors, and all have imitators; an understanding of the historical basis of the dictionary-making is therefore one of the conditions for further progress in the academic lexicography. The documents in this volume, presented at the 1986 seminar Exeter, investigate most lexicographical traditions of the world, some take them back to their beginning. The program was divided into eight sessions, with the following concentrations of topics: (1) classical traditions, (2) the early history of European lexicography, (3) the beginnings of English lexicography, (4) additional aspects of lexicography English, (5) the background of different national developments, (6) the specific characteristics of national developments, (7) the pioneers of three kinds, (8) recent trends in English. Theoretical lexicography is the academic study of the sememodic, spelling, synthetic and paradigmatic characteristics of Lexemes del Lexicon (vocabulary) of a language, developing theories of the dictionary of components and structures that connect data in dictionaries, the needs of information by Users in specific types of situations and how users can best access the data embedded in printed and electronic dictionaries. This is sometimes called "metexicography". There is some disagreement on the definition of lexicology, distinguished by lexicography. Some use "Lexicology" as a synonym of theoretical lexicography; Others use it to mean a branch of linguistics relating to the inventory of words in a particular language. A person dedicated to lexicography is called lexicographer. [1] Focus General Lexicography focuses on design, compilation, use and evaluation General dictionaries, I.e. dictionaries that provide a description of the language in general use. Such dictionary is usually called a general dictionary or LGP dictionary (language for general purposes). General).lexicography focuses on the design, compilation, use and evaluation of specialized dictionaries, ie dictionaries that are devoted to a (relatively small) set of linguistic and factual circumstances of fields of one or more specialist subjects, eg legal lexicography. This dictionary is usually called a specialized dictionary or language for specific purposes and according to Nielsen Dictionary in 1994, specialized dictionaries are either multi-field single field or sub-field dictionaries. And 'now widely it accepted that lexicography is an academic discipline in self © right, not a sub-branch of applied linguistics, as the main object of study in lexicography is the dictionary (see for example Bergenholtz / Nielsen / Tarp 2009). Lexicography is the practice of creating books, computer programs, or databases that reflect the lexicographical work and intended for public use. These dictionaries and thesaurus which are widely accessible resources that present various aspects of lexicography, such as spelling, pronunciation and meaning. Lexicographers have to define simple words and partecipates © understand how compound or complex words or words with many meanings can be clearly explained. They also make decisions on what words should be kept, added or removed from a dictionary. They are responsible for the lexical material organization (usually in alphabetical order) to facilitate the understanding and navigation. [2] Etymology coined in English 1680, the word "lexicography" derives from the greek lexikographos Â Â »Ã Â¾Ã Î¼Ã Â¹Ã Â°Ã Â¿Ã Â³Ã Ã¬Ã Ã Ã¿Ã , 'lexicographer', [3] as lÂ »Ã Â¾Ã Î¼Ã Â¹Ã Ã Â½ Â°Ã lexicon, neut. The lexikos of Â »Ã Â¾Ã Î¼Ã Â¹Ã Â°Ã I" by and for the words ", [4] as lÂ» Ã Ã¾Ã Â¹Ã Lexis, "speech", "word", [5] (itself from the Â »Ã Â³Ã lego," to say "," talk "[6]) and Â³Ã Ã Ã Ã¬Ã graph," zero, to enroll , to write". [7] lexicographical work practical aspects involving different activities, and compiling dictionaries well-crafted requires careful consideration of all or some of the following aspects: profiling intended users (ie linguistic and non-linguistic skills) and identify their needs define the communicative and cognitive functions of the selection of the dictionary and the dictionary organizing the components by choosing the appropriate structures for presenting the data in the dictionary (ie frame structure, distribution structure, macrostructure, micro-structure and the structure cross-reference) by selecting the words and affixes per accommodation as entries selecting collocations, phrases and examples who choose lemma forms for each word or part of a word to be lemmatized define organization words that precise pronunciations definitions of words to label the definitions and registry pronunciations and dialect, if appropriate equivalents selection in dictionaries bi- and multi-lingual TR anslating collocations, phrases and examples bi- and multilingual dictionary design the best way users can access data in One One One printed and electronic dictionariesthe objective of lexicography is to maintain the lexicographic information costs incurred by dictionary users as low as possible. Nielsen (2008) suggests relevant aspects for lexographs to consider when dictionaries are made as they all influence the impression of users and the actual use of specific dictionaries. Theoretical lexicography concerns the same aspects of lexicography, but aims to develop principles that can improve the quality of future dictionaries, for example in terms of access to data and lexicographic information costs. Several perspectives or branches of such academic dictionary research were distinct: 'digestivecritical' (or assess the quality of one or more dictionaries, for example by means of reviews (see Nielsen 1999), 'history dictionaries' (or trace the traditions of a type of dictionary or lexicography in a particular country or language), 'type dictionary' (or classify the various kinds of monolingual reference work' An important consideration is the status of 'bilingue lexicography', or the compilation and use of the bilingual dictionary in all its aspects (see for example Nielsen 1894). Despite a relatively long history of this type of dictionary, it is often said[according to who?] to be less developed in a number of aspects than its unilingual counterpart, especially in cases where one of the languages involved is not a main language. Not all kinds of reference works are available in interlingual versions, such as LSP, students and encyclopaedic types, although sometimes these challenges produce new subtypes, such as 'semi-bilingual' or 'bilingue' dictionaries such as Hornby's (Oxford) Advanced Learner's Dictionary English-Chinese, which have been developed by translating existing monolingual dictionaries (see Marello 1998).
